Digital Logistics Marketplace

SYSTEM DESIGN DOCUMENT

Value-Added Services Expansion

Cargo Measurement | Pickup & Drop-off | Self-Declaration CBM

Document Type	System Design Document — Internal
Prepared by	VEYQON GROUP (Pty) Ltd Reg. 2026/353683/07
Product	ShareConLoad shareconload.com
Version	v1.0 — Initial Release
Date	June 2026
Classification	Confidential — Internal Use Only

1. PURPOSE AND SCOPE

This System Design Document defines the architecture, business logic, user flows, role definitions, payment structures, and operational rules for three new services being added to the ShareConLoad platform:

- ▶ Cargo Measurement Service — enabling shippers to obtain professionally verified CBM and weight figures before booking
- ▶ Pickup and Drop-off Service — enabling shippers to request door-to-warehouse last-mile transport after booking
- ▶ Self-Declaration CBM Booking — enabling shippers who already know their cargo dimensions to proceed directly to booking with defined accountability rules

These services expand ShareConLoad from a container space booking marketplace into an end-to-end pre-shipment journey platform — covering cargo measurement, space booking, and cargo collection under a single digital experience.

ShareConLoad remains a technology marketplace intermediary. All new service providers (Cargo Measurement Agents and Transporters) operate as independent contractors. ShareConLoad facilitates the connection and manages the payment flow; it does not execute the physical services.

2. NEW PLATFORM ROLES

2.1 Cargo Measurement Agent

Cargo Measurement Agents are independent contractors registered on the ShareConLoad platform who travel to a shipper's location to measure and weigh cargo, and submit a verified measurement report through the platform.

Responsibilities

- ▶ Travel to the shipper's declared valuation address within the agreed timeframe
- ▶ Accurately measure cargo dimensions (length, width, height in metres) and weight
- ▶ Calculate CBM correctly using the formula: $L \times W \times H$
- ▶ Upload the mandatory photo evidence package via the platform mobile interface
- ▶ Submit the completed measurement report on-platform, triggering auto-delivery to the shipper
- ▶ Maintain calibrated measurement equipment at all times

Onboarding and Vetting Requirements

Requirement	Detail
National Identity Verification	Valid government-issued ID (SA ID, national passport, or equivalent per jurisdiction)
Selfie Verification	Live selfie matched against ID document at onboarding
Equipment Proof	Photo submission of calibrated measuring tape and weighing scale
ShareConLoad Certification Test	Platform-administered test covering CBM calculation, irregular cargo measurement, volumetric weight, measurement report completion, and platform variance rules
Platform Rules Orientation	Mandatory reading and acknowledgment of Measurement Agent Service Agreement

2.2 Transporter

Transporters are independent contractors registered on the ShareConLoad platform who collect cargo from a shipper's door and deliver it to the assigned operator's warehouse, ready for consolidation and shipment.

Responsibilities

- ▶ Collect cargo from the shipper's declared pickup address within the agreed timeframe
- ▶ Transport cargo safely and intact to the operator's designated warehouse
- ▶ Confirm collection and delivery events on the platform in real time
- ▶ Bear full liability for cargo from point of collection to warehouse delivery
- ▶ Maintain vehicle in roadworthy condition at all times

Onboarding and Vetting Requirements

Requirement	Detail
National Identity Verification	Valid government-issued ID per jurisdiction
Valid Driver's Licence	Appropriate licence class for declared vehicle type
Proof of Vehicle Ownership or Authorisation	Ownership papers or written authorisation from vehicle owner
Vehicle Photos	Minimum four photos: front, rear, left side, right side — submitted at registration
Vehicle Capacity Declaration	Declared payload capacity and vehicle type (bakkie, 1-ton, 3-ton, flatbed, etc.)
Platform Rules Orientation	Mandatory reading and acknowledgment of Transporter Service Agreement and cargo handling standards

3. CARGO MEASUREMENT SERVICE

3.1 Service Overview

The Cargo Measurement Service enables shippers who do not know their cargo's CBM and weight to request a professional on-site measurement visit before proceeding with a container space booking. The output is a platform-generated, photo-verified Measurement Report that feeds directly into the booking flow.

3.2 Pricing Structure

Pricing is distance-based, calculated from the nearest available Cargo Measurement Agent's registered base location to the shipper's declared valuation address. ShareConLoad sets rate bands per city and region — agents do not set their own rates. Agents compete on availability and platform rating only.

Rate bands will be defined per city tier at platform launch and updated periodically by ShareConLoad operations. Example structure: Johannesburg CBD rate band, Greater Gauteng rate band, Lagos rate band, Accra rate band, Nairobi rate band.

3.3 Revenue and Payout Model

Item	Detail
Who pays	Shipper — full payment upfront at time of service request
Platform commission	20% of total job fee retained by ShareConLoad
Agent payout	80% of total job fee paid to the Cargo Measurement Agent after report submission confirmed
Payment timing	Full payment collected upfront; payout released upon successful report and photo package submission
Currency	USD unless otherwise specified by regional configuration

3.4 End-to-End Service Flow

Step 1 — Shipper Requests Measurement

- Shipper navigates to the Cargo Measurement Service on the ShareConLoad marketplace

- ▶ Shipper inputs their valuation address (street address or map pin for areas without formal addresses)
- ▶ Platform calculates the job fee based on the applicable city/region rate band and distance to the nearest available agents
- ▶ Platform displays the quoted fee to the shipper
- ▶ Shipper reviews and either accepts or rejects the quoted fee
- ▶ If rejected, no charge is applied and the shipper exits the flow

Step 2 — Payment

- ▶ Shipper accepts the quoted fee and proceeds to full upfront payment via the platform (processed through Paystack)
- ▶ Payment confirmation is sent to the shipper via email and platform notification
- ▶ The job is queued for agent assignment

Step 3 — Agent Assignment and Dispatch

- ▶ Platform assigns the nearest available, highest-rated Cargo Measurement Agent whose base location covers the shipper's area
- ▶ Agent receives the job notification via platform and email, including shipper's address and contact details
- ▶ Agent confirms acceptance of the job on the platform
- ▶ Shipper receives agent confirmation notification including agent name, contact number, and estimated arrival window

Step 4 — On-Site Measurement

- ▶ Agent travels to the shipper's valuation address
- ▶ Agent measures all cargo dimensions (L x W x H in metres) and weighs each item or total consignment
- ▶ Agent calculates CBM for each item and total CBM for the consignment
- ▶ Agent uploads the mandatory photo evidence package via the platform:
 - Minimum 4 cargo photos — front, back, left side, right side
 - 1 measurement photo — tape measure visibly placed against the longest cargo dimension
 - 1 scale photo — cargo on weighing scale with reading clearly visible
 - 1 location confirmation photo — agent with cargo at valuation address (GPS coordinates and timestamp auto-embedded)
- ▶ Platform validates that GPS coordinates in the location photo match the declared valuation address within an acceptable radius
- ▶ Agent inputs all measurements and weight figures into the platform form

Step 5 — Report Generation and Delivery

- ▶ Once all photos are uploaded and measurements entered, the platform auto-generates the Cargo Measurement Report
- ▶ Report is delivered simultaneously to the shipper's platform dashboard and via email

- ▶ Report contains: total CBM, item-by-item breakdown, total weight, measurement date and time, agent name and certification ID, GPS-confirmed location, and photo evidence package reference
- ▶ Shipper can use the confirmed CBM and weight figures directly in the ShareConLoad booking flow

3.5 Measurement Report Contents

Report Field	Source
Shipper Name and Account ID	Platform account
Valuation Address	Shipper input — GPS confirmed
Measurement Date and Time	Auto-generated at submission
Agent Name and Certification ID	Agent platform profile
Item-by-Item Dimensions (L x W x H)	Agent input
Item-by-Item CBM	Platform calculated
Total Consignment CBM	Platform calculated
Total Weight (kg)	Agent input
Photo Evidence Package Reference	Auto-linked from uploaded photos
Platform Report ID	Auto-generated unique identifier
Disclaimer Statement	Auto-appended — see Section 5.3

4. PICKUP AND DROP-OFF SERVICE

4.1 Service Overview

The Pickup and Drop-off Service enables shippers who have completed a container space booking to request last-mile cargo collection from their location to the operator's warehouse. Shippers are matched with registered Transporters based on proximity, vehicle capacity, and platform rating. Shippers who prefer to deliver cargo themselves may select the self drop-off option at any time.

4.2 Revenue and Payout Model

Item	Detail
Who pays	Shipper — full payment upfront at time of pickup request
Platform commission	15% of total transport fee retained by ShareConLoad
Transporter payout	85% of total transport fee paid to the Transporter upon confirmed warehouse delivery
Payment timing	Full payment collected upfront; payout released upon Transporter confirming warehouse delivery on the platform
Currency	USD unless otherwise specified by regional configuration

4.3 End-to-End Service Flow

Step 1 — Post-Booking Trigger

- ▶ After a shipper completes a container space booking, the platform displays a prompt: "Do you require Pickup and Drop-off for this shipment?"
- ▶ Shipper selects one of two options:
 - Request Pickup and Drop-off — proceeds to the matching flow
 - Self Drop-off — shipper confirms they will deliver cargo to the operator's warehouse independently; no further action required

Step 2 — Cargo Address Input

- ▶ Shipper inputs their cargo pickup address (street address or map pin)
- ▶ Platform records the operator's designated warehouse address as the drop-off destination (auto-populated from the booking)

Step 3 — Transporter Matching

- ▶ Platform runs a three-factor matching algorithm:
 - Proximity — distance from Transporter's current registered location to shipper's pickup address
 - Vehicle capacity — Transporter's declared payload capacity must meet or exceed the shipper's declared cargo volume and weight
 - Platform rating — minimum rating threshold must be met to appear in match results
- ▶ Platform surfaces a shortlist of the 3 nearest qualifying Transporters, displaying for each:
 - Transporter name and verified badge
 - Vehicle type and declared capacity
 - Platform rating and number of completed jobs
 - Estimated arrival time
 - Quoted transport fee
- ▶ Shipper selects their preferred Transporter from the shortlist

Step 4 — No Transporter Available

- ▶ If no qualifying Transporter is found within the initial search radius, the platform displays: "No Transporter is currently available within [X km] of your location."
- ▶ Shipper is offered the option to expand their search radius manually
- ▶ Expanding the radius triggers a new search with the larger coverage area; the platform displays the updated fee estimate reflecting the greater distance
- ▶ Shipper may expand the radius as many times as needed, or exit to the self drop-off option at any stage

Step 5 — Payment

- ▶ Shipper confirms their selected Transporter and proceeds to full upfront payment via the platform (processed through Paystack)
- ▶ Payment confirmation sent to shipper and Transporter via email and platform notification

Step 6 — Collection and Delivery

- ▶ Transporter travels to the shipper's pickup address and collects cargo
- ▶ Transporter confirms cargo collection on the platform — shipper receives collection notification
- ▶ Transporter delivers cargo to the operator's warehouse
- ▶ Transporter confirms warehouse delivery on the platform — shipper and operator both receive delivery notification
- ▶ Transporter payout (85% of transport fee) is released upon confirmed warehouse delivery

Step 7 — Liability

The Transporter bears full liability as an independent contractor for any cargo damaged or lost between the shipper's pickup address and the operator's warehouse. ShareConLoad's liability is limited to platform facilitation only. Transporters are required to acknowledge this liability in their Service Agreement at onboarding.

5. SELF-DECLARATION CBM BOOKING

5.1 Service Overview

Shippers who already know their cargo's CBM and weight may proceed directly to a container space booking without requesting a Cargo Measurement Service visit. To protect operators and the platform from pricing disputes arising from inaccurate self-declared figures, a structured accountability framework applies to all self-declared bookings.

5.2 Booking Flow

- ▶ Shipper selects "I know my cargo dimensions" during the booking flow
- ▶ Shipper inputs their declared CBM and weight
- ▶ Platform displays the CBM Accuracy Disclaimer (see Section 5.3) — shipper must actively acknowledge via checkbox before proceeding
- ▶ Platform displays the disclaimer a second time at booking confirmation — shipper must acknowledge again
- ▶ Booking proceeds with the shipper's declared figures as the basis for space allocation and pricing

5.3 CBM Accuracy Disclaimer

I confirm that the CBM and weight declared are accurate to the best of my knowledge. I understand that if the actual cargo measurements recorded at the operator's warehouse exceed my declaration by more than 5%, I will be responsible for any additional charges, which will be added to my Stage 2 payment. If the actual measurements are more than 5% below my declaration, the resulting credit will be applied to reduce my Stage 2 payment. ShareConLoad will notify me immediately when any variance is recorded.

5.4 CBM Variance Rules

When cargo arrives at the operator's warehouse, the operator measures and records the actual CBM and weight on the platform. The following variance rules apply:

Scenario	Variance Threshold	Financial Outcome	Notification
Actual CBM within 5% of declared	Within tolerance	No adjustment — booking price stands	None required
Actual CBM exceeds declared by more than 5% (overage)	Outside tolerance — over	Surcharge calculated and added to Stage 2 payment (due 7 days before departure)	Shipper notified immediately via email and platform alert
Actual CBM is more than 5% below declared (underage)	Outside tolerance — under	Credit calculated and applied to reduce Stage 2 payment	Shipper notified immediately via email and platform alert

Variance tolerance is set at plus or minus 5% of the shipper's declared CBM. This is consistent with standard freight industry practice and accounts for minor measurement differences between home measuring tools and calibrated warehouse equipment.

5.5 Overage Surcharge — Process

- ▶ Operator measures actual cargo CBM at warehouse and records the figure on the platform
- ▶ Platform automatically calculates the variance against the shipper's declared CBM
- ▶ If variance exceeds +5%, platform calculates the surcharge amount based on the applicable per-CBM rate for the booking
- ▶ Shipper receives immediate notification via email and platform dashboard alert detailing: declared CBM, actual CBM, variance percentage, and surcharge amount
- ▶ Surcharge is added to the shipper's Stage 2 payment (50% pre-departure payment due 7 days before vessel departure)
- ▶ Failure to pay the Stage 2 payment inclusive of the surcharge within the required timeline may result in booking cancellation per the standard Cancellation and Refund Policy

5.6 Underage Credit — Process

- ▶ Operator measures actual cargo CBM at warehouse and records the figure on the platform
- ▶ Platform automatically calculates the variance against the shipper's declared CBM
- ▶ If variance exceeds -5%, platform calculates the credit amount based on the applicable per-CBM rate for the booking
- ▶ Shipper receives immediate notification via email and platform dashboard alert detailing: declared CBM, actual CBM, variance percentage, and credit amount
- ▶ Credit is applied directly to reduce the shipper's Stage 2 payment (50% pre-departure payment due 7 days before vessel departure)
- ▶ Updated Stage 2 payment amount (after credit) is displayed on the shipper's dashboard

6. PAYMENT ARCHITECTURE

6.1 Payment Summary — All Services

Service	Who Pays	Timing	SCL Commission	Provider Payout
Container Space Booking	Shipper	3-stage: 20% / 50% / 30%	Deducted from Operator payout	Operator receives net payout at each milestone
Cargo Measurement	Shipper	100% upfront at request	20% of job fee	80% released on report submission

Service	Who Pays	Timing	SCL Commission	Provider Payout
Pickup and Drop-off	Shipper	100% upfront at request	15% of transport fee	85% released on warehouse delivery confirmation

6.2 CBM Adjustment Payment Integration

Adjustment Type	Direction	Applied To	Trigger
CBM Overage Surcharge	Additional charge to shipper	Added to Stage 2 payment	Operator records actual CBM exceeding declared by more than 5%
CBM Underage Credit	Reduction in shipper payment	Deducted from Stage 2 payment	Operator records actual CBM more than 5% below declared

6.3 Payment Processor

All payments across container bookings, Cargo Measurement Service, and Pickup and Drop-off Service are processed through Paystack. ShareConLoad operates as merchant of record for all transactions. Provider payouts are disbursed by ShareConLoad from collected funds after deducting applicable platform commissions.

7. NOTIFICATION FRAMEWORK

7.1 Cargo Measurement Service Notifications

Event	Recipient(s)	Channel
Service fee quoted and accepted	Shipper	Platform
Payment confirmed	Shipper	Email + Platform
Agent assigned and dispatched	Shipper + Agent	Email + Platform
Measurement report generated and available	Shipper	Email + Platform

7.2 Pickup and Drop-off Notifications

Event	Recipient(s)	Channel
Transporter shortlist presented	Shipper	Platform
Payment confirmed	Shipper + Transporter	Email + Platform
Cargo collected from shipper address	Shipper	Email + Platform
Cargo delivered to operator warehouse	Shipper + Operator	Email + Platform

7.3 CBM Variance Notifications

Event	Recipient	Channel	Timing
CBM overage detected (>+5%)	Shipper	Email + Platform alert	Immediately when operator records actual CBM
CBM underage detected (>-5%)	Shipper	Email + Platform alert	Immediately when operator records actual CBM
Stage 2 payment updated (overage or credit applied)	Shipper	Email + Platform	Same trigger — included in variance notification

8. PLATFORM IDENTITY AND LIABILITY BOUNDARIES

ShareConLoad remains a technology marketplace intermediary across all services described in this document. The following statements define the liability boundaries applicable to the new services:

- ▶ ShareConLoad does not employ Cargo Measurement Agents or Transporters. All service providers are independent contractors.
- ▶ ShareConLoad does not physically measure cargo, transport cargo, or take possession of cargo at any stage.
- ▶ Cargo Measurement Agents bear sole responsibility for the accuracy of measurements submitted through the platform, subject to the mandatory photo evidence requirements.
- ▶ Transporters bear full liability for cargo from point of collection at the shipper's address to confirmed delivery at the operator's warehouse.
- ▶ ShareConLoad's liability in connection with the Cargo Measurement Service and Pickup and Drop-off Service is limited to the amounts paid to ShareConLoad for the specific service transaction in question.
- ▶ The CBM Accuracy Disclaimer constitutes a binding acknowledgment by the shipper of their responsibility for self-declared cargo figures, and is recorded on the platform at time of booking.

9. DESIGN DECISIONS LOG

The following table records all key design decisions made during the brainstorming and gap-closure process that produced this document.

#	Decision Area	Decision Made
01	Revenue model	Shippers pay on-platform; ShareConLoad deducts commission; net amount paid to service provider
02	Measurement Agent commission	20% retained by ShareConLoad; 80% to agent
03	Transporter commission	15% retained by ShareConLoad; 85% to Transporter
04	Payment timing — both services	Full payment upfront at time of service request
05	Measurement pricing mechanism	ShareConLoad-set rate bands per city/region; agents do not set rates
06	Transporter matching	Shortlist of 3; filtered by distance + vehicle capacity + platform rating
07	No transporter available	Shipper can manually expand search radius; fee updates to reflect greater distance
08	CBM variance tolerance	Plus or minus 5% of declared CBM before any adjustment triggers
09	CBM overage payment timing	Added to Stage 2 payment; shipper notified immediately via email and platform
10	CBM underage credit timing	Applied to Stage 2 payment; shipper notified immediately via email and platform
11	Measurement Agent role name	Cargo Measurement Agent (not Cargo Valuator — avoids legal connotations)
12	Measurement Agent vetting	Identity verification + ShareConLoad platform certification test
13	Transporter vetting	ID + valid driver's licence + vehicle ownership/authorisation proof + vehicle photos + platform rules orientation
14	Transit liability	Transporter bears full liability from collection to warehouse delivery
15	Measurement report delivery	Auto-generated on-platform upon photo package and measurement submission; simultaneous email and dashboard delivery
16	Photo evidence requirement	Mandatory: 4 cargo photos, 1 measurement photo, 1 scale photo, 1 GPS location photo

10. HOW IT WORKS — CARGO MEASUREMENT AGENT

10.1 Role Purpose

A Cargo Measurement Agent is an independent contractor registered and certified on the ShareConLoad platform whose sole function is to travel to a shipper's location, physically measure and weigh their cargo, and submit a verified, photo-evidenced Measurement Report through the platform. The report gives the shipper an accurate, platform-verified CBM and weight figure that they can use directly in their ShareConLoad container space booking — or for any other logistics purpose.

Cargo Measurement Agents do not handle, transport, store, or take possession of cargo at any time. Their role is limited to measurement, documentation, and report submission.

10.2 Step-by-Step: How a Cargo Measurement Agent Works

Step 1 — Registration and Certification

- ▶ The agent applies to join the ShareConLoad platform as a Cargo Measurement Agent
- ▶ Agent submits the following during onboarding:
 - Valid government-issued identity document
 - Live selfie matched against identity document
 - Photos of calibrated measuring tape and weighing scale
 - Declaration of service area (city or region they will cover)
- ▶ Agent completes the ShareConLoad Cargo Measurement Certification Test covering:
 - CBM calculation: Length x Width x Height in metres
 - Handling irregular-shaped cargo measurements
 - Volumetric weight vs actual weight
 - Completing the platform measurement report correctly
 - Platform variance rules and disclaimer obligations
- ▶ Agent reads and acknowledges the Cargo Measurement Agent Service Agreement
- ▶ Upon approval, agent is activated on the platform and becomes visible for job assignment within their declared service area

Step 2 — Receiving a Job

- ▶ A shipper requests a Cargo Measurement Service on the platform and makes full upfront payment
- ▶ The platform assigns the job to the nearest available, highest-rated active agent within the shipper's area
- ▶ The agent receives a job notification via the platform and email, containing:

- Shipper name and contact number
- Valuation address (with map pin)
- Requested measurement date and time window
- Job fee and expected payout (80% of total job fee)
- ▶ Agent confirms acceptance of the job on the platform within the required response window
- ▶ Shipper receives confirmation that an agent has been assigned, including the agent's name, certification ID, and estimated arrival time

Step 3 — Conducting the Measurement

- ▶ Agent travels to the shipper's declared valuation address at the agreed time
- ▶ Agent measures all cargo items: Length (m) x Width (m) x Height (m) for each item
- ▶ Agent weighs each item or the full consignment on their calibrated scale
- ▶ Agent calculates CBM for each item and total CBM for the full consignment
- ▶ Agent uploads the mandatory photo evidence package through the platform mobile interface before the report can be submitted:
 - Minimum 4 cargo photos — front, back, left side, right side
 - 1 measurement photo — tape measure visibly placed against the longest cargo dimension
 - 1 scale photo — cargo on the weighing scale with the weight reading clearly visible
 - 1 location confirmation photo — agent standing with the cargo at the valuation address (GPS coordinates and timestamp auto-embedded by the platform)
- ▶ Platform validates that the GPS coordinates in the location photo match the shipper's declared valuation address within an acceptable radius — this prevents report submissions without a physical site visit

Step 4 — Submitting the Report

- ▶ Agent enters all measurement figures and weights into the platform report form
- ▶ Platform calculates total CBM automatically from agent's inputs
- ▶ Agent reviews and submits the completed report — submission is blocked until the full photo evidence package is uploaded
- ▶ Platform auto-generates the Cargo Measurement Report instantly upon submission
- ▶ Report is delivered simultaneously to:
 - The shipper's platform dashboard
 - The shipper's registered email address
- ▶ Agent's payout (80% of the job fee, less platform commission of 20%) is released upon confirmed report submission

Step 5 — Shipper Uses the Report

- ▶ Shipper receives their verified CBM and weight figures in the Measurement Report
- ▶ Shipper can proceed directly to a ShareConLoad container space booking — their verified figures are auto-populated into the booking form, bypassing the self-declaration step

- ▶ If the shipper's actual cargo at the operator's warehouse varies from the Measurement Report figures by more than 5%, the Measurement Agent's submitted report serves as the reference document for any variance dispute

10.3 Cargo Measurement Agent — Earnings Summary

Item	Detail
Gross job fee	Set by ShareConLoad rate bands per city/region based on distance
ShareConLoad commission	20% of gross job fee
Agent net payout	80% of gross job fee
Payout trigger	Released upon successful report and photo package submission
Payout method	Via platform — processed through Paystack

10.4 Cargo Measurement Agent — Key Rules

- ▶ Agents must only accept jobs within their declared service area
- ▶ Agents must arrive within the agreed time window — repeated late arrivals or no-shows result in rating penalties and potential platform suspension
- ▶ All 7 required photos must be uploaded before a report can be submitted — no exceptions
- ▶ GPS location in the location photo must match the shipper's address — fraudulent submissions result in immediate deactivation
- ▶ Agents may not solicit direct payment from shippers outside the platform — all payments flow through ShareConLoad
- ▶ Agents may not share shipper contact details or cargo information with any third party
- ▶ Measurement figures must reflect actual physical measurements — deliberate misreporting results in permanent deactivation and potential legal action

11. HOW IT WORKS — TRANSPORTER

11.1 Role Purpose

A Transporter is an independent contractor registered on the ShareConLoad platform who collects cargo from a shipper's specified pickup address and delivers it safely to the operator's designated warehouse, ready for consolidation and container loading. The Transporter bears full liability for the cargo from the moment of collection at the shipper's door to the moment of confirmed delivery at the warehouse.

Transporters operate exclusively within the ShareConLoad platform ecosystem. All job assignments, payments, confirmations, and communications are managed through the platform. Transporters may not solicit or accept direct jobs from shippers outside the platform.

11.2 Step-by-Step: How a Transporter Works

Step 1 — Registration and Onboarding

- ▶ The Transporter applies to join the ShareConLoad platform
- ▶ Transporter submits the following during onboarding:
 - Valid government-issued identity document
 - Valid driver's licence appropriate for their declared vehicle type
 - Proof of vehicle ownership or written authorisation from the vehicle owner
 - Four vehicle photos — front, rear, left side, right side
 - Vehicle type and declared payload capacity
- ▶ Transporter reads and acknowledges the Transporter Service Agreement, including full liability acknowledgment for cargo in transit
- ▶ Transporter completes the Platform Rules Orientation covering cargo handling standards, confirmation procedures, and conduct requirements
- ▶ Upon approval, Transporter is activated on the platform and becomes available for job matching within their declared operating area

Step 2 — Being Matched to a Job

- ▶ After a shipper completes a container space booking, they may request a Pickup and Drop-off service
- ▶ The shipper inputs their cargo pickup address and the platform runs the three-factor matching algorithm:
 - Proximity — distance from the Transporter's current location to the shipper's pickup address
 - Vehicle capacity — Transporter's declared payload must meet or exceed the shipper's cargo volume and weight

- Platform rating — Transporter must meet the minimum rating threshold to appear in results
- ▶ The platform presents the shipper with a shortlist of the 3 nearest qualifying Transporters, showing each Transporter's name, vehicle type, capacity, rating, estimated arrival time, and quoted fee
- ▶ The shipper selects their preferred Transporter and completes full upfront payment on the platform
- ▶ The selected Transporter receives a job notification via the platform and email containing:
 - Shipper name and contact number
 - Cargo pickup address with map pin
 - Operator warehouse delivery address with map pin
 - Shipper's declared cargo description, volume, and weight
 - Job fee and expected payout (85% of total transport fee)

Step 3 — Cargo Collection

- ▶ Transporter travels to the shipper's declared pickup address at the agreed time
- ▶ Transporter meets the shipper or their representative and inspects the cargo against the declared description
- ▶ If the cargo appears significantly different from what was declared (type, volume, or condition), the Transporter may flag a discrepancy on the platform before proceeding
- ▶ Transporter loads the cargo safely onto their vehicle, taking responsibility for secure loading
- ▶ Transporter confirms cargo collection on the platform — this confirmation:
 - Notifies the shipper that their cargo has been collected
 - Timestamps the start of the Transporter's liability window
 - Records the Transporter's GPS location at point of collection

Step 4 — Delivery to Operator Warehouse

- ▶ Transporter delivers the cargo to the operator's designated warehouse address as specified in the job details
- ▶ Transporter offloads the cargo at the warehouse and obtains acknowledgment from the warehouse or operator representative
- ▶ Transporter confirms warehouse delivery on the platform — this confirmation:
 - Notifies the shipper that their cargo has been delivered successfully
 - Notifies the operator that the cargo is at the warehouse and ready for consolidation
 - Timestamps the end of the Transporter's liability window
 - Triggers the Transporter's payout release (85% of the transport fee)

Step 5 — After Delivery

- ▶ The shipper's cargo is now at the operator's warehouse and the container booking flow continues as normal
- ▶ The operator measures the actual cargo CBM at the warehouse — if the shipper self-declared their CBM, the variance rules in Section 5 apply
- ▶ The Transporter's platform rating is updated based on the shipper's post-delivery rating

- Transporter becomes available for new job assignments immediately after confirming delivery

11.3 Transporter — Earnings Summary

Item	Detail
Gross transport fee	Set by ShareConLoad distance + vehicle type rate bands per corridor
ShareConLoad commission	15% of gross transport fee
Transporter net payout	85% of gross transport fee
Payout trigger	Released upon Transporter confirming warehouse delivery on the platform
Payout method	Via platform — processed through Paystack

11.4 Transporter — Liability Framework

The Transporter bears full liability as an independent contractor for any cargo lost, damaged, or destroyed between the point of collection at the shipper's address and the point of confirmed delivery at the operator's warehouse. ShareConLoad's liability is limited to platform facilitation only and does not extend to physical cargo in transit.

Liability Event	Responsible Party	Resolution Path
Cargo damaged in transit	Transporter	Shipper raises dispute on platform; ShareConLoad mediates; Transporter liable for damages
Cargo lost in transit	Transporter	Shipper raises dispute on platform; ShareConLoad withholds payout pending investigation
Cargo damaged before collection (pre-existing)	Shipper	Transporter flags discrepancy at collection on platform before proceeding
Delay in delivery	Transporter	Shipper notified via platform; repeated delays result in rating penalties
Incorrect delivery address	Transporter	Transporter responsible for redelivery at no additional charge to shipper

11.5 Transporter — Key Rules

- Transporters must confirm collection and delivery on the platform in real time — delays in confirmation affect rating

- ▶ Transporters must only accept jobs their declared vehicle can physically accommodate
- ▶ Transporters may not subcontract jobs to other drivers without ShareConLoad approval
- ▶ Transporters may not solicit direct payment from shippers outside the platform — all payments flow through ShareConLoad
- ▶ Transporters may not use cargo information for any purpose beyond completing the job
- ▶ Repeated cancellations after accepting a job result in rating penalties and potential suspension
- ▶ Any cargo discrepancy at collection must be flagged on the platform before the Transporter confirms collection — post-collection disputes where no discrepancy was flagged are the Transporter's liability
